Product-Focused Data Scientist Turning Models into Decisions

EDUCATION:

M.S. in Data Science, University of California, San Diego | Sep 2022 - Mar 2024

- Specialization: Machine Vision and Interaction Design

B.S. in Statistics and Data Science, University of California, Los Angeles | Sep 2019 - Jun 2022

- Dean's Honors List every quarter | Research: UCLA DataRes, CycleGAN image style transfer (Make-A-Monet)

EXPERIENCE:

Senior Data Scientist, Tesla, Palo Alto - Jul 2024 - Present

- Own go/no-go qualification for 10+ vendor and in-house battery cell programs as cell owner
- Built computer vision models that inspect every Tesla 4680 battery cell, catching 98% of critical defects
- Lifted core collapse detection to 98% recall and 95% precision by diagnosing errors by vendor and build
- Forecast thermal-runaway risk and warranty life from 1 TB of telemetry across 3.5M vehicles
- Scaled CT inspection to 2,000+ battery cells/day on a distributed Celery/Redis pipeline across 6 VMs
- Shipped quality dashboards used daily by 45 engineers across 4 teams, saving 200+ technician hours/week
- Built a RAG assistant over vendor battery cell documents that cites the source behind every answer

Data Scientist, Standard AI, San Francisco - Sep 2023 - Jun 2024

- Lifted shopper conversion 29% with randomized in-store A/B tests built on camera-based 3D shopper tracking
- Partnered with product and sales to define engagement metrics behind $600K in new contracts
- Grew revenue 15% across two stores by simulating shopper paths to test layout changes

Cell Engineer Intern, Tesla, Palo Alto - Jan 2023 - Sep 2023

- Raised defect-detection recall 40% over the previous filter with a Vision Transformer on CT scans
- Cut electrolyte leaks 20% in 5 months with a Tableau dashboard linking dissections to production data

Summer Associate, Credit Fraud Risk, JPMorgan Chase, Wilmington - Jun 2022 - Aug 2022

- Improved a small-business loan default XGBoost model 14% in PySpark
- Explained high-risk applicant segments to federal regulators using hierarchical clustering

Undergraduate Researcher, Rolls-Royce North America, Remote - Oct 2019 - May 2020

- Built a pipeline on per-flight engine telemetry to set optimal compressor wash intervals
- Cut aircraft maintenance triage from 3-4 hours to under 5 minutes with an R Shiny tool

AWARDS AND RECOGNITION:

- Tesla Spot Option Grant for outstanding work, awarded as my team's top performer (Oct 2025)
- 1st place, Chevron track, Rice Datathon (2021)
- 1st place overall, Berkeley DSS Datathon (2020)
- 2nd place overall, Retina AI R Datathon (2020)
- 2nd place, Prosperity track, UCSD DataHacks (2021)
- 3rd place, City Search track, TAMU Datathon (2020)
- Gandhi Memorial Scholarship (2019)

TECHNICAL SKILLS:

- Python, R, SQL, PySpark, PyTorch, scikit-learn, XGBoost, OpenCV, LLMs/RAG, MCP, Databricks, Snowflake, AWS, Docker, MLflow, Tableau, A/B Testing
